Comments: As a couple in our 60's we thought our biking days were drawing to an end as every year we were able to go less distance. The ebikes has changed our lives dramatically. We are able to go further and further as the months go by as we adjust to our new freedom. We are able to see stuff we never dreamed possible. We strive for distance and enjoyment and not speed, in fact we go slower and are passed by younger fit regular bike riders constantly. Like a car, it is not the vehicle and the different power options it is the driver. We believe in regulation and should be like a car and speed limits enforced. You don't close down the hiways because some people are reckless and/or speed. Please allow our older generation to be able to enjoy and explore our National forests. We are afraid to ride on the roads, with the ever increasing frustrated drivers, as our safety is the utmost importance. Therefore we only ride on the trails. We also have no interest in the so called single tracks that the young mtb riders covet as most are too dangerous for us also. Thank you.
