Title:

Comments: I am 72 with multiple back issues and my wife is 69 with cancer. We recently purchased Rad Mountain Bikes which are class 2. I did not even realize riding on trails would be an issue. My mistake. Anyway I ride with my son and without the ebike, I have to walk up some hills and going downhill he rides much faster than I with his regular mountain bike. In general my observation is most young guys ride much faster than I do. I am not sure what the issue is but recently we were elk hunting where Ebikes are not allowed. I took my battery off and had to walk up hills. I was stopped by a private party and told that even without the battery< I was in violation? I am hoping for some clarification and leniency. Not sure if it would be too cumbersome to have an age requirement on sticker for handicap to help us out. Thanks
