Comments: First of all the present rules aren't enforced. My concerns is as the technology evolves like motorcycles and UTV's the bikes will become ever more powerful. As a rider in the Tahoe area I already see these bikes traveling at unsafe speeds even going uphill. I've been run off the trail on several occasions. I am not against e bikes as my wife rides one. A single track trail use by pedal only powered bikes has a somewhat natural speed limit which can easily be exceeded by most modern ebikes and all manufacturers are announcing more powerful motors. As there is no present enforcement I'm fearful that pretty soon it will be just a bunch of motorcycle ripping up the trails.

Thanks.
