Comments: Thank you for letting us comment on our need to incorporate Class1 eMTBs into all public lands where traditional MTBs are allowed. My husband goes out and rides many different trail systems and I need pedal assist to help keep up with him and my kids. I've seen they already allowed this into the National Parks already so Class1 eMTBs should be allowed everywhere a regular MTB goes including National Forest areas. This is also very much widely accepted in Europe, Australia & New Zealand, time for America to catch up.
