Comments: Hello reviewer,

Please consider an alternative to this timber sale that would allow native stakeholders to select trees for cultural use prior to the sale. Also, please consider allowing bark to be extracted from trees for cultural use prior to the sale. The Tongass Land Management Plan states a mission of sustaining timber for culture and heritage use. By allowing tribes to extract bark from trees and select both individual trees and groves of trees from this sale, the Forest Service is helping to sustain culture and heritage. To facilitate this request, it is essential to share this opportunity with tribal leaders and community members alike. Thank you for your consideration of this request.

Sincerely,

Adelaide Johnson
