Comments: I fully support any measures allowing ebikes on fs bike trails. I am older with ever increasing mobility problems but still need to get outside, it is therapeutic. I know for a fact I am still slower than a competent biker on their standard bicycle, even uphill, I have compared strava times. Not really even an issue with the 20mph limitation anyway. They are so quiet, noise is not a concern either. And they are low power, they dont tear up the trail like a dirtbike would. I don't see any reason to restrict them as they are currently, thank you.
