Title:

Comments: I have had open heart surgery for a aneurism in my Aorta. although corrected I am constantly aware of my blood pressure and need to keep that under control. I ride my class 1 ebike in an effort to stay fit. I often look forward to riding with friends that do not use a E Mnt. bike. We all ride single track trails as well as paved roads. With my disability the new FSM rules with allowing E mnt. bikes on NSF trails will allow me to recreate without being discriminated against. I am 65 years old and look forward to the change. Peddle assist allows me to keep my disability under control while exercising. I do not agree that the E mnt. bike represents a hazard on NFS trails. There is only an assist when peddling. When going downhill I almost never peddle. Therefore there is no assist. Please allow the change to FSM management of single track trails and allow Class 1 E bike access. I look forward to recreating in a safe environment with my friends.
