Comments: As a National Interscholastic Mountain Bike Coach, local mountain bike racer, and huge fan of our natural places, I am 100% for allowing class 1 e-bikes (pedal assist) on all single track trails that are currently allowing regular non-battery powered/pedal assist bikes. I have observed no difference in how my wife's class 1 e-bike impacts a trail compared to my traditional mountain bike. Class 1 e-bikes do not impact a trail like horse hooves do or even worse, cows. Cattle is the number one way to destroy a trail and the scenery. My wife loves her e-bike as it provides her the ideal zone 2 cardio exercise she loves for staying fit. I also love that they are silent, and do not tear up the trail like motor cycles or cattle. Class 2 and 3 e-bikes should be restricted to forest service roads and not allowed on single track hiking/biking trails.
