Comments: Please give class one ebikes their own classification so that local communities can determine, during travel management, which trails would be suitable for their inclusion just as we do for all other uses. Class 2 and 3 "e-bikes" propel humans with a motor without human exertion and should therefore be classified by what they are; motorcycles. Electric and combustion motorcycles should only be allowed on motorized trails. We have an alarming increase in recreational usage in some popular areas and adding another use will only exacerbate the problem. We can add class 1 ebikes to some non-motorized trails that do not already have an overuse problem.
