Comments: This management plan is absolute garbage.

There is so much proposed wilderness its absolutely insane. The next 20 years will bring huge advancements in technology for cleaner energy. we have already seen just with Covid alone a massive increase in recreation.

The proposals to make wilderness areas out of current forest sections used by snowmobiles, mountain bikes, motorbikes, ohv is not management, its locking up public land from public use. These areas need to be protected, but we can do that in ways that still allow multiple public recreation types included motorized use.

Motorized use in the next 10 years will drastically change to clean energy and silent motors. This plan does not account for any current uses of the land and future uses of the land.

This plan does not allow for expansion of recreation in the future beyond foot traffic, which accounts for very little actual use on public lands in these areas.

Please change the plan to account for future recreation opportunities including snowmobiles, mountain bikes, ebikes, motorbikes, electric OHVs.
