Comments: Class 1 ebikes should be allowed everywhere non-ebikes are allowed. They perform exactly like regular bikes, do not contain a throttle, and open access to terrain and distances previously unavailable to some riders. Riders with mild disabilities can enjoy the trails they would not be able to enjoy otherwise. It also extends the age at which people are able to ride and enjoy bikes in the outdoors. A class 1 ebike has been able to allow me to ride with my father and him with his grandson. Something we were able to do for quite a few years because he couldn't keep up any longer. He has a relatively serious heart condition but at 73 years old has been able to once again enjoy the trails and ride extensively off road in the woods on single track due the the advent of quality ebikes. I am 100% behind allowing them to share the same trails as standard bicycles (class 1 only). Thank you for your consideration of this issue.
