Title:

Comments: My wife has stage 4 colon cancer and we live a mile from the forest boundary. She has had multiple surgeries and each time we have used her ebike and the forest for her recovery. Our bikes have a peddle assist motors. The frame and tire size match a conventional my bike. For the life of me why would we restrict people with disease, age and handicap's from enjoying the mountains like health normal people. Please open all mt bike trails to standard size bikes and ebikes to both enjoy.
