Comments: Adding E bikes to our non motorized trails is asking for serious accidents to man and beast. There are plenty of motorized trails already. Bicycles alone are causing trails to rut and become very narrow. E Bikes with further their decline. Stock use is becoming more and more dangerous with bicycles and now you want to add E bikes! They can travel as fast as a motorcycle downhill and up to 12 mph uphill. What chance does an equestrian have get safely out of their way.

The Salmon-Challis FS needs to address the current conditions of trails without adding more detrimental use to them and putting current users in harms way adding E-bikes on our poorly maintained trails.... which seem to disappear off maps at an alarming rate.
