Comments: I am an avid mountain biker and fully support the implementation of the numerical class system for EMTB. Specifically for class one bicycles I am for allowing these anywhere a traditional bicycle is allowed. In my opinion the experience on the EMTB is the same as a traditional mountain bike. We don't want to have access issues for mountain biking like California is experiencing . There's a community demand for mountain bike trails and this includes class one electric mountain bikes. Fulfilling this community need and providing people with outdoor areas to recreate is paramount. Individuals and families should spend time outside and exploring the beautiful country that we have. Thank you
