Comments: E-bikes are a motorized vehicle that should be classified and managed just like any other motorized vehicle. They should only be permitted on roads and trails that currently allow motorized travel. E-bikes weigh 2-3X more than a typical mountain bike and travel uphill at a much higher speed; their use on trails designed and maintained for non-motorized travel, will cause irreparable resource damage. The decision on this issue should be quite simple; bikes powered by a motor of any size or type should be managed as a motorized vehicle.
