Comments: Having been a mountain biker for 30 years and also having experience with mountain e-bikes, I can attest that Ebikes and mountain bikes are extremely similar in their riding characteristics and therefore fully compatible in their use on non motorized trails.

For most e-bike users, the performance of the ebike will place them substantially below the performance of advanced users on mountain bikes, making the transportation medium no more impactful on the surfaces of trails.

As an experienced motorcycle rider, I can knowledgeably assure that e-bikes and motorcycles have nothing in common other than having two wheels.

Allowing e-bikes in non motorized trails is a common sense action that will give access to public lands to demographics currently excluded due to age or physical limitations.
