Comments: As an avid mountain bike rider I strongly support the use of Class 1 ebikes on NSF roads and trails that currently (or in the future) allow non-ebikes. I currently do not own an ebike, but know several people who do. These individuals would not be riding due to pre-existing conditions, if not for an ebike. Is there a reason these individuals should not be able to ride on USFS trails simply because they have a class 1 ebike? And from my observations, class 1 ebikes cause no more environmental harm than a regular bicycle.
