Comments: To all concerned, I also am in full support of the Potts Creek Vegetation Management project, as a landowner with property adjacent to the proposed burn area. Based on the information available, it appears that a large amount of diligence has been undertaken in the development of this project, and I hope that continued diligence is taken to protect adjacent and private property prior to the prescribed burn activities. This is not to detract from my support, but rather to voice continued caution as many homes and families lie very close to the forest. I appreciate this effort and would be glad to see it undertaken.
