Comments: I do not support ebikes on non motorized trails. I hike, mountain bike, ebike and ride motos bike in national forest and blm. E bikes are more similar to Moto's and should stay on trails designed for Moto's. E-bikes are too fast and heavy for non motorized trails. They can generate 3 to 4 or more times the power as human powered bikes. treat them as they should be classified as motos. I do ride e-bike too and they work great on motorized trails where they belong.

Thanks for your consideration. Keith Johnson
