Comments: Hi:

Ebikes are already classified as bikes and have been proven to have less impact than equestrians (and bikes don't leave feces in the middle of the trails). There are numerous studies that have already been completed. Please don't block out the fastest growing segment of the biking industry. Ebikes have changed my life and allowed my family and I to ride more together. I won't get into my injuries and how ebikes help me stay active because you've probably seen that comment MANY times already. My injuries are my business though and not to be published here. However, I must say that if it wasn't for an ebike I would not do nearly as much biking as I do now.

Let's get real here. There's no point in wasting more time effort and money on keeping E-bikes off of the trails. Let the people ride! I don't care if you raise the parking fee or if you do something like we do here in California where you can buy a poppy pass. Everybody needs access
