Comments: I would like to offer my support to this project. I am in favor of the vegetation treatments outlined, including the 746 acres of regeneration harvests, 185 acres of group selection harvests, invasive species control, and TSI. The use of existing and temporary roads is appropriate, with the temporary roads put back to bed. Prescribed burning has been shown to improve habitat for wildlife and create age and structural diversity. These actions will help the area meet the desired forest conditions outlined in the Forest Plan.

I am a professional forester and have worked in forestry for 38 years, and my views are informed by my training and experience.
