Comments: I support expanding access for class 1 e-bikes on all public lands, including the ones specifically listed on this project. As a class 1 user with long term injuries that prevent me from riding a manually powered bike, e-bikes represent my primary form of access.

Additionally, my experience with e-bikes for the past 2 years as shown me that they are functionally equivalent to manual bikes with respect to other users. Specifically, this means that trail damage, downhill speeds and on-trail behaviors are virtually identical to the MTB user group.
