Comments: Most people don't have the stamina required to navigate a lot if not most dirt bicycle trails at Lake Tahoe, California/Nevada. Older people who rode the trails when in stellar shape at a younger age can now enjoy the great outdoors again with electric pedal assisted mountain bikes. With electric pedal assisted mountain bikes people won't need to be shuttled with an auto to the mountain/trail tops to enjoy riding down the mountain.

As a motorcycle enthusiast, I can verify that pedal assisted electric mountain bikes have much more in common with bicycles than motorcycles as far as environmental impacts are concerned.

Thanks for getting input from a person who spend dozens if not over 100 days a year enjoying awesome recreation on USFS land.
