Comments: Midas Gold and the Stibnite Gold Project must be stopped.

The Canadian company plans to shut off public access to many areas that us outdoors citizens, hunters, and hikers have access to for many, many years.

The environmental impact of thousands of truck trips, dust, pollution, disruption of game trails and migration patterns, and questionable promises to remediate the site when mining terminates makes this a horrible deal for Idaho citizens. Additionally, the traffic impact and congestion in McCall, Payette, Cascade, and rural areas will be extensive - including the housing construction that this project will require. We absolutely, vehemently oppose this project for all the reasons noted above. Please re-visit all environmental impacts and reject this foreign invasion of our great state. Thank you,
