Comments: Midas Gold has shown a commitment to responsibly designing future mining and carrying out responsible exploration for almost a decade at Stibnite. This behavior and responsibility is not common in the mining industry as evidenced by the legacy mining at Stibnite. Even as a Superfund site the East Fork of the South Fork continues to be contaminated with heavy metals and arsenic from mining runoff. Midas is this watershed's only hope to be cleaned once and for all. The pros of this project far outweigh the cons. The environmental and economic benefits make this an obvious project that Valley County and the USFS must support!! Give Midas Gold the chance to fix some of the most beautiful waters of western Idaho!
