First name: Alan

Last name: Reynolds

Organization:

Title:

Comments: Forest Service, I believe this is a very deficient application at Stibnite. The EIS is not accurate or complete. It is authored by the very people who are going to cause the damage and I can guarantee they won't complete the rehabilitation on the site. Digging in and under the river? Really? Filling a pristine tributary valley with poison mine tailings? Building a road in a designated Wilderness? The South Fork Salmon is the best remnant salmon spawning river left in the Salmon system and you would allow a PIT mine in its main tributary? The jobs would go to out-of-state miners, not Yellow Piners. This will cause the most damage of any recent mining disaster. Look at Monumental creek. This application has to be denied. The lawsuits will be many. Alan Reynolds, 45 year SF Salmon recreator.
