Comments: My wife uses an E-Bike with assistance type motor only no self power mode. She was an active rider and a member of womens riding clubs. She rode pavement and trail regularly. As she aged she struggled with riding. She purchased an E-Bike with an assistance style motor, it is not self propelled. She now get's out regularly and rides with me. I support E-Bikes on trail systems that will only work if the rider is peddling the bike otherwise it is simply a motorized vehicle. The integration of motor with peddling gets people out and moving adding quality to their lives.
