Comments: Wow, i vehemently do not approve this. Old growth forests need more protection, and I am alarmed by taking away these protections of "Wildlife Screens". Big trees over 21" are crucial for wildlife and ecological integrity- they need protection! Not only this, but they also prevent fire spread!

Withdraw the proposal to take away protections for large trees and the wildlife species that depend on them. The Forest Service needs to cancel their plans to increase large tree logging. Drop this attempt to replace a protective standards with an unenforceable guideline. There need to be specific guidelines to protect the forests and thus protect the lives of all people, including those who are making these decisions, INCLUDING YOU! This is very alarming and I do not support it.
