Title:

Comments: I was injured in a helicopter crash and was left partially paralyzed. Using eBikes has allowed me to get out there with my friends and get exercise I need. I understand why some would not want ebikes that have throttles and go over 20mph BUT the class 1 eBikes that are not assisted over 20mph and must be pedal assisted with no throttle seems like a no brainer. These bikes must be pedaled and cannot "burn out" or roost the trails.

Please allow class 1 ebikes on all national forest trails. It allows people like me who cannot access these trails otherwise a way to get out and enjoy. Thanks
