Comments: To whom it may concern,

e-bikes have an electric motor & therefore should be managed with other Motorized Trail users. The majority of trails on public lands are Motorized Trails so recreation opportunities for e-bikes are already abundant.

E-bike users tend to have a smaller skill-set so their impact on Non-motorized Trails can be significant.

Many Non-motorized Trail systems have been built and maintained by various Mountain Bike organizations on both private and public lands. Many of these Trail systems have agreements with funders and land owners/managers that prohibit any Motorized access so e-bikes could jeopardize those agreements.

Thank you for this comment opportunity.
