Comments: Single track MTB trails should only allow Class 1 e-bikes that required pedaling and speed limited to 20mph. While that is still too fast for most mountain bike single track, we seem to be stuck with that standard.

Class 2 requires no pedaling and thus is no different than an electric dirt bike and should be limited to access provided to motorized dirt bikes.

Class 3 e-bikes, while require pedaling, can go up to 28mph which is too fast for single track MTB trails that do not permit motorized dirt bikes. Class 3 are ok for trails permitted for motorized dirt bikes.
