Comments: If e-bikes are introduced for use on Federal lands, then I suggest they only be used on paved or motor vehicle surfaces, NOT on hiking, or walking trails. E-bike users often believe they have the right-of-way and if push comes to shove, they will shove. I have been a victim of this irrational behavior, and to avoid being run over, I had to jump off the trail to evade any injury. There should also be a limited amount of these e-bikes available based on the size of our National Parks. Paterson Falls National Park for instance won't support even one e-bike. With e-bike popularity growing, these bikes must be introduced very carefully and rules of use must be in effect. Thank you for considering my comments.
