Comments: Thank you for the opportunity to comment on Midas Gold Idaho's Alternative 2. Over the last several years, I've had the opportunity to hear a handful of presentations on the Stibnite Gold Project, sit down with project staff and observe how the company has lived out its mission as it has grown. It is with this knowledge that I encourage you to permit the Stibnite Gold Project. If the Stibnite Gold Project moves forward, it will be the only antimony mine in the America. This important mineral is used as a metal strengthener and fire retardant. It is used in everything from batteries, textiles, cell phones, plastics and cable sheathing. Right now, we import all of our antimony. With all that is currently going on in the world, it is more important than ever that we not rely solely on foreign countries for minerals of such great importance. It is estimated that the Stibnite Gold Project could provide approximately one-quarter of American demand for antimony. I am also an avid fisherman and the fact that Midas has designed a tunnel, specifically for fish, speaks volumes to what their vision for this watershed should look like. Being able to reconnect Salmon and Steelhead to their native spawning grounds is something all of us should support. I look forward to the day when Midas shows all of us the first Salmon swimming through that tunnel!! I encourage the USFS to move the Stibnite Gold Project forward and permit Midas Gold Idaho's project as outlined in their Modified Plan of Restoration and Operations, alternative 2 in the DEIS. The USFS has provided meaningful time to submit comments and already extended the comment period once, there should be no further delays.
