Comments: Please do not allow the Stibnite Gold Project EIS #50516 to proceed. The value of the land far exceeds a minuscule possibility of profit from the destruction of natural resources. Temporary jobs do not help support an economy. The owners of the mining company will take the profit, if there is one, away with them. The state, people, and country will just see destruction and no value added to their lives with temporary work. A long term solution is the environmentally friendly natural tourism. One were people takes photos and only leave foot prints as a mark they were there. Killing off wildlife downstream kills tourism. Reduction in fishing populations removes huge profit margins of fishing tourism. The destruction of the wildlife and animals/fish around and downstream is unacceptable, which happens with every mine in existence because there is no technology available to stop it which would make the mine profitable.

I say No to this mine project. Please do not allow it to happen. Please help keep the much more lucrative fishing and other natural eco tourism to take place for long standing jobs.

Thank you.
