Comments: I think ebikes should not be on any trails at all, due to the safety of others. So far I have seen several ebikes on trails and they are very quite and very fast. With ebikes going fast they are very dangerous to hikers, and horse back riders. If for some reason if they approve ebikes on trails, then at least have the option for people not to hike or horse back ride on the days the bikes and ebikes are on the trails. The best way to do that is make odd days for bikes and ebikes and hikers if they choose. And even days for horse back riders, and hikers. I have been hit by bicycles head on on my horse 3 times. This is extremely dangerous. I can't imagine a person riding a ebike with their head phones on and hitting someone because they couldn't hear and came up a pond someone so quick. Ebikes are almost like a motorcycle. You wouldn't want hikers and horse back riders on the interstate with motorized vehicles. Please think about it. Thanks
