Title:

Comments: E-bikes are motor vehicles. This is indisputable, and should be relegated to trails that allow motorized uses. Allowing them on non-motorized trails will compromise the experience of non-motorized trail users, as well as increase the likelihood conflicts and accidents on the trails. The last thing our increasingly popular non-motorized trail systems need are inexperienced riders on fast moving, heavy and potential dangerous motor vehicles added to the mix of equestrian, pedestrian and human powered vehicle users.
