Title:

Comments: E-bikes have motors. Therefore they are motorized. Functionally, the USFS does not have the ability to differentiate and enforce varying rules for different classes of e-bikes. Abuse of existing rules is already rampant. Please take your time and recognize the very real challenges to enforcement and the tremendous assisted power available to current e-bikes. The only safe path forward at this time is to rightfully treat all e-bikes as motorized use. They have motors and it is dangerous to allow this line to be blurred. Thank you for your time.
