Title:

Comments: As a rider of Mountain bikes for decades, I have been riding an e-bike for the last 5 years. I am 70 years old. My level of fitness has improved, and I looks forward to my 3 rides a week. E-bikes are bicycles as classified by the CA Dept of Motor vehicles and should be treated as such. They are not motorcycles and should not be classified in the same category with much more powerful vehicles

.For Class 1, 20mph. You still have to peddle. Class 2,20 mph. peddle or throttle. Class 2 are helpful for some people who have leg issues.

Class 3 throttle and higher speed. 28mph e-bikes are most often commuter bikes ridden on the street.Why limit people on electric vehicles that allow them to gain access to NFS lands.

Do not limit access for the e bike community.We are citizens, taxpayers and deserve access to our federal lands.
