Title:

Comments: I maintain that any trail that allows mountain bikes should allow e bikes. E bikes are used by mostly the older population - most who will never use the trails or we use them cautiously. People purchase ebikes because they need assistance at altitude. These bikes are not motorized. They assist those who have difficulty pedaling. To disallow them is discrimination against those less able.

They are human powered not gas powered

No emissions and very quiet.

I think those with throttles should be disallowed but not pedal assist.
