Comments: E-bikes are motorized vehicles. That is a given. Motorized vehicle traffic has been a problem for many National Forests and BLM lands. Neither the BLM or Forest Service has sufficient staff to monitor motorized uses. There are many environmental problems associated with motorized roads. That is past history, current times, and a future projection. Allowing E-bikes onto non-motorized trails will become a huge problem. That problem will be a huge mistake. Once or if that happens, any change back will be difficult. And I say that as a bicyclist.
