Comments: I am concerned that it appears that the reason for the rule is to allow e-bikes on non-motorized trails in the future because the agency is treating e-bikes differently than other motor vehicles. This conflicts with your agency's own Travel Management Rule and has the potential to impact the environment, so the agency should analyze such a proposal under the National Environmental Policy Act.

For far too long conservationists have ignored the threat that mountain biking poses to wildlands, wildlife, and Wilderness. Research shows that like all recreation, mountain bikes displace wildlife, and because they travel farther and faster than hikers or equestrians, they can impact a much greater area in the same amount of time. E-bikes can travel much farther into the backcountry in less time, and startle and disturb wildlife over far greater distances. E-bikes also conflict with nonmotorized trail users like hikers, horseback riders, and bicyclists.

But beyond these direct impacts to nature, a significant segment of the mountain biking community has become one of the most ardent opponents of wilderness designation and, more significantly, is pushing to open existing Wildernesses to bikes. That will presumably include e-bikes if they're eventually allowed on non-motorized trails on public lands.

I am not in favor of allowing e-bikes freer reign on public lands due to the impacts it will have on the environment and the ability to enjoy the public lands--keeping them as wild as possible.
