Comments: Ebikes are motorized vehicles and should be restricted to the same places as all other motorized vehicles. They are a clear conflict with both hikers and cyclists. My experience is that many users are people who are otherwise unable to access bike trails due to poor physical conditioning or skill are dangerous and obnoxious to everyone else. I realize y'all want to accommodate these new users but please not to the detriment of all the historical recreationists. You currently allow stock animals in our wilderness areas to 10,000 feet much to the detriment of all other trail users and there is lasting degradation that is avoidable. Please take this opportunity to avoid that same well intended pitfall and protect both the resources and people's experience. Thank you.
