Title:

Comments: Greetings - E-bikes should be treated as motorized vehicles. The USFS is under no obligation to provide additional opportunities for E-bike users. There already are plenty of opportunities currently available on motorized roads and trails. Illegal proliferation of user-built mountain bike trails is already a big problem on National Forest lands and loosening restrictions on E-bikes will only make this worse. Just because a new toy is developed, the USFS should not be obligated to provide unique opportunities for their use. For example, if all-terrain tanks become popular, should the USFS provide opportunities for their use? I think not. Please continue to regulate E-bikes as motor vehicles. Thanks, Greg
