Title:

Comments: As an avid mountain biker, I oddly do not feel that ebikes are appropriate in most settings. They have a motor, even as class 1, therefore should have to follow motorized guidelines. I say this due to the nature frequented by ebike riders, who use the power to ride around groups instead of passing on trail, as an example of the lack of etiquette and trail abuse that this class adds. Ebikes should be allowed, but only in the capacity of trails that other motorized vehicles may already use.
