Comments: I ride a Class I e bike and have been passed on hills by younger people on regular mtn bikes many times. Why would a class I be a threat to anybody? The quality of exercise and recovery time using an e bike is much better for me as a 74 yr. old. I'm less likely to have a heart attack trying to climb hills. Putting myself on local motorized trails tends to increase the danger from user conflicts as my bike is too slow to be blocking single track trails while motorized bikes are trying to pass. Mixing with regular mtn bikes makes MUCH more sense. It seems that opponents of class I e bikes are not educated on how they work. Basically, they just take 30yrs. off your body. Please allow Class I on the trails. Motorized trails and roads are unsafe for us.
