Title:

Comments: The Emnt Bike should not be classified as a motorized vehicle or motorcycle. There should be a distinct classification for bikes that are electric assisted that require the rider to be physically peddling the bike for the electric assist to operate. This type of bike can easily and safely operate on the same trails systems as hikers, runners, peddle only bikes, as well as some horse trails. This classification can also assist with meeting some ADA access to trails by providing individuals with some physical limitations to operate a bike improving fitness opportunities.
