Comments: E-bikes definition should not be classified as a motor vehicle. A motorized vehicle that produces exhaust should not be allowed on the trails for mountain biking, hiking, and equestrian riding where fresh air is enjoyed during physical activity. The amount of air pollution and fumes produced by true motorized vehicles hinder the outdoor experience. E-bikes do not produce the same exhaust and noise pollution as true motorized vehicles. Motorized vehicles that are operated with fuel can increase damage to trails at a faster rate than non-motorized. E-bikes are different in that they can still be ridden under human power even if the battery is dead and do not require fossil fuel. Please reconsider classifying E-bike classification. As someone that does not own an E-bike I do not want this to potentially cause an increase of true fuel motorized vehicles allowed on non-motorized trails.
