Comments: I want to enter my objection to allow mining in the South Fork drainage regarding the Stibinite Gold Project EIS 50516. I have camped and fished in this area, spent money in Yellow Pine and the surrounding area. It is ridiculous to assume that a mining project could come in and destroy an amazing area. All the guarantee in the world that it will be reconditioned once they are done tearing up the place is incorrect. How many times have we gone through something like this only to have to deal with polluted land and water. New technology will not keep the land and water from being polluted. With everything going on in the world can we not have a bright spot, do we have to pave every last thing over. Please do not allow the Midas company to proceed. Thank you.
