Comments: To whom it may concern,

We need to keep spaces free from motorized usage. The line needs to be drawn firmly here. From all history, we know that relaxing standards creates new precedents and our quiet spaces will quickly fill with other motorized devices and vehicles. Motorized bikes (or e-bikes) are not compatible with biking trails and will quickly destroy the trails that bikers have spent countless hours developing. The distinction between hiking and mountain biking was delineated years ago and so were dirt bikes/ATVS vs bikes. E-bikes are no different than any motorized vehicle.
