Comments: I believe that Electric mountain bikes should be allowed on mountain bike trails but should be regulated by type. Pedal assisted (ie only apply power while the person riding is pedaling) I feel are appropriate and should be allowed on MTB trails.

Electric Mountain bikes that apply power, without the rider pedaling I think blurs the line between a bike and a electric motorcycle and should not be allowed on a MTB trail (exceptions here for those with disabilities that cannot pedal, and should allow for Electric trikes for the same reason)
